PROJECTS

BRIDAL-AR APP (FINAL YEAR RESEARCH PROJECT)

This project is an Augmented Reality (AR) based application that allows users to virtually try on wedding dresses. It leverages the Unity MARS package and the LiDAR sensor on iPhone 12 Pro (or later) to provide accurate body tracking and measurement, enabling users to see how different wedding dresses and jewelry would look on them in real-time.

NEURAL NETWORK FOR TREE SPECIES CLASSIFICATION IN UNIVERSITY GARDEN

This project aims to develop a neural network model for accurate classification of different tree species present in a university garden. The primary objective is to leverage machine learning techniques to aid in the efficient management and conservation of plant species, showcasing the practical application of artificial intelligence in the field of botany.

DO-IT APP

This is a simple To-Do List application that allows users to manage their tasks. Users can add, delete, and edit tasks, and the application uses a database to store tasks persistently.

LIBRARY SYSTEM

This is an Android application that helps manage a library. It provides features for adding, viewing, editing, and deleting books, members, and lending details. using Android studio/JAVA

FLIXPORT

Flixport is a portfolio website that allows users to create and manage their online portfolios. The project provides a step-by-step guide on how to set up and use the website, including instructions for downloading the files, setting up the database, and accessing the website.
